Leading Data Forensics Team Finds Total Security with FileCloud

Locked Down: File Sharing and Security

Leading Data Forensics Team (DFT) with over 15 years of experience in digital forensics across multiple disciplines, including data, audio and video forensics has been on the cutting edge of digital forensics since their inception. DFT's background in a variety of practice areas including intellectual property theft, employment disputes and digital fraud with litigation savviness has made DFT a top choice in their industry for years.

DFT works with many different types of clients, and as leaders in the digital forensics space, security, access control and auditability are of utmost importance to them and their clients. After getting to the root of a client's issues, DFT works hard to ensure that they are fully protected and their issue never arises again.

Securing data, controlling permissions and complete system auditing are vital for DFT's continued success as well as that of their clients.

Where did they find all the tools they needed in one place? With FileCloud.

Security and Traceability

DFT was in the market for a complete solution to data security for their clients. With clients across industries, DFT needed a versatile platform that could offer complete customization without losing out of features and security.

To ensure all of their clients needs were met, DFT needed a solution that would allow their clients to quickly and easily share data while implementing total security, customized permissions and highly detailed audit abilities. They needed a solution that would be easy to use but still provided for their complex data security needs.

Before finding FileCloud, DFT had looked at many of the big players in the industry. But DFT had worked with clients that experienced data theft from a large cloud provider and quickly realized the audit trail available would not satisfy their needs. Aside from the lacking audit ability, many of the providers were simply not customizable enough to work across DFT's varied clients.

FileCloud, with their deep customization and detailed auditing capabilities was just what DFT needed.

DFT Requirements

DFT's complex requirements and varied needs were based on a need for security, control and auditability. To meet all of these requirements, DFT required a solution that provided:

- Complete customization
- Detailed audit capabilities
- Ease of use for varied users
- Data leak prevention

DFT Selects FileCloud

DFT had been looking for the perfect data control and file sharing solution for some time. They had looked at all of the leading providers and several of the other players. They tried a few, but soon found the big box solutions wouldn't meet their needs. After testing FileCloud through a free trial, DFT quickly realized that FileCloud provided industry leading audit capabilities, allowed for a large degree of customization to suit client needs, and was easy enough for almost anyone to use.

DFT now uses FileCloud for their clients and has not had an instance of data theft that they could not track down almost immediately again. With FileCloud in place, DFT is secure in knowing that they can track every user's downloads and shares, ensuring data is secure and stolen data is found and addressed quickly. DFT is happy and their clients are secure.

Try FileCloud Now

FileCloud's extensive functionality, ease of use, affordability, and world-class support make it the solution for file share, sync, and mobile access already adopted by enterprises and organizations around the world. You too can benefit from FileCloud and its industry-leading quality and performance today! Contact us at FileCloud now and take advantage of our [free 14-day trial](#) to see what FileCloud can do for your business.

Summary

FileCloud is used by 1000s of customers around the world including Global 2000 enterprises, government organizations, educational institutions, and managed service providers.

“We liked FileCloud’s pricing, comprehensive feature set (branding, encryption) and the responsive support”

Stewart

To compete in today’s fast-paced market, companies need to get business done without being slowed down by IT challenges. CodeLathe understands this. CodeLathe’s FileCloud software is a solution focused on enterprise file sharing that is just as helpful to business practices as it is to IT requirements.

- Integration with existing resources helps lower business operating costs
- Extensive feature-set and ease of use helps increase user productivity
- Support for an ever-increasing reliance on a mobile workforce keeps you competitive.

FileCloud offers an Enterprise File Sharing and Sync (EFSS) solution that enables you to realize the benefits of collaboration and productivity with the security you require to protect your Intellectual Property anywhere it goes in the course of doing business.
